PROFESSIONAL SUMMARY

IT undergraduate with hands-on experience in building ML models, full-stack web apps, and IoT systems. Developed AI-powered solutions including a brain tumor detection model (96% accuracy) and a plant disease detection system published at IC3SE-2025. Skilled in Python, React.js, Flask, and SQL, with a solid grasp of REST APIs and deep learning. Looking to contribute as a Software Developer, Full Stack Developer, or ML Engineer.

EDUCATION

Kalasalingam Academy of Research and Education Bachelor of Technology in Information Technology (CGPA – 8.18/10.0) [Virudhunagar, TN]	2022 – 2026
GDMM Junior College Board of Intermediate Education, Andhra Pradesh (Percentage: 78.3) [Nandigama, AP]	2020 - 2022
Sri Chaitanya Techno School State Board of Secondary Education (Percentage: 100) [Penuganchiprolu, AP]	2019 - 2020

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, JavaScript
- **Web Development:** HTML, CSS, React.js, Flask
- **Core Concepts:** OOPS, DBMS, REST APIs, Data Structures
- **Tools:** Git, VS Code, Google Colab, Arduino IDE
- **Soft Skills:** Leadership, Communication, Problem-solving, Critical Thinking
- **Languages:** Telugu, English, Hindi, Tamil

PROJECTS

Explainable Brain Tumor Detection from MRI Images Using EfficientNet-B3 [Project Link](#)

- Built a deep learning model using EfficientNet-B3 for MRI image classification, achieving 96% validation accuracy.
- Integrated Grad-CAM visualization to improve model interpretability and highlight tumor regions.
- Developed a Flask-based REST API for real-time image upload and prediction.

Automated Disease Detection of Plants Using ResNet9 and YOLOv8 [Project Link](#)

- Designed a deep learning-based plant disease detection system using YOLOv8 for real-time localization and ResNet9 for classification.
- Trained and optimized the model on labelled leaf datasets to achieve high accuracy and fast inference.
- Developed the solution to support early disease identification and assist precision agriculture practices.

Voice Controlled Home Automation System

- Developed an IoT-based smart home automation system using ESP8266 NodeMCU to control household appliances efficiently.
- Integrated Amazon Alexa for voice commands and the Blynk platform for remote monitoring and control.
- Implemented real-time device status tracking and manual override functionality for flexible and reliable automation.

PUBLICATION

- Presented research paper titled “Automated Disease Detection Using ResNet9 and YOLOv8” at IC3SE-2025 (Under publication). [Certificate Link](#)

CERTIFICATION

- Database Management Systems (DBMS) – CodeChef [Certificate Link](#)
